

The registration of Unmanned Aircraft and the installation of a remote ID function have been mandated.

———— Subject to registration ————

Unmanned aircraft weighing 100 g or more

(including drones and model aircraft)

Prior to every flight, please ensure that your Unmanned Aircraft is registered and has a remote ID function.

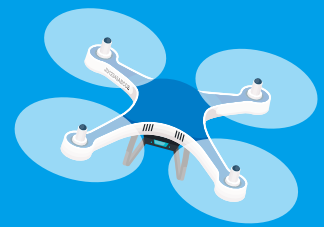

Refer to the following website for details.

<https://www.mlit.go.jp/koku/drone/en>

Unmanned Aircraft Registration

Three steps are required to register your unmanned aircraft.

STEP 1

Application

You can apply online or by submitting documents. Enter/complete the information such as the name and address of the owner and the user of the unmanned aircraft, and the manufacturer and model of the aircraft in your application. Applications can be made from December 20, 2021.

STEP 2

Payment

Please pay the fee for the application, when you receive your payment number after the application for registration. You can pay by credit card or Internet banking, or at an ATM. Please note that application fees and payment methods vary depending on the application method.

STEP 3

Issuance of a registration ID

After all procedures are completed, a registration ID will be issued for the unmanned aircraft. Please clearly display the registration ID in such a way that you write it on the airframe before flying.

Application method and fees

Application method	First aircraft	Second or more aircraft (when applying at the same time as the first aircraft)
Online application using your individual number card (My Number Card) or gBizID	900 yen	890 yen/aircraft
Online application using other means of identification such as a driver's license and a passport	1,450 yen	1,050 yen/aircraft
Paper-based application	2,400 yen	2,000 yen/aircraft

In addition to the registration of your Unmanned Aircraft, you need to install a remote ID function to it.

The remote ID function refers to a function that remotely transmits the identification information of Unmanned Aircrafts via radio waves. Included in the identification information are the Unmanned Aircraft's serial number, registration ID, location, speed, altitude, etc. Even during a flight, the registration of the Unmanned Aircraft is confirmed in order to detect unauthorized flights for the purpose of securing aviation safety.

*No personal information is contained in identification information.

For more information, please refer to the unmanned aircraft registration web portal.
